EXPERIENCE

NOAH Business Applications

January - May 2026

Business Analyst Developer Intern

- Tested and debugged software modules for partnered bank clients, ensuring functionality aligned with defined business rules and quality standards.
 - Analyzed business requirements and translated them into testing criteria to validate module compliance and performance.
 - Managed time effectively across a hybrid work setup, consistently meeting deliverables and deadlines while balancing on-site and remote responsibilities.
-

PROJECTS

Terramap (React.js, Tailwind CSS, Express.js, MySQL)

Front-End Developer | DENR-CAR Regional Office Collaboration

- Served as a Front-End Developer in the project, primarily responsible for developing and maintaining the Terramap module and administrative interface of the web application.
- Trained a U-Net deep learning model for land cover classification using Sentinel-2 L2A satellite imagery, integrating the trained model into the web platform, and deploying a production-ready system tailored to DENR-CAR's operational needs.
- The web delivers municipal-level land cover insights to support environmental monitoring and land-use decision-making across the region.

CW POS System (React.js, Tailwind CSS, Docker, MySQL)

Front-End Developer | Freelance

- Developed the front-end interface for a POS and Inventory Management System, implementing CRUD operations and workflow-friendly features for warehouse and store staff.
 - Built convenience features to streamline workflows for warehouse and store staff, improving usability and reducing manual effort.
-

SKILLS

Soft Skills
